Pull-Out Test (POT) by Waldevar ensure structural integrity and reliability of PV installations, optimizing foundation systems for long-term stability, enhanced performance, and cost ...

During the test, a continuous tensile load is applied until the anchor slips out of the ground. The maximum value recorded indicates the degree of resistance of the anchor to pull-out. ...

Bolt pull-out tests were performed on soft rock using the distinct element method, in which a new contact model that considers bond size, is employed to constrain the main rock mechanical behaviour.

The device comprises: draw anchor board, prop up roof, jack, pressure dial plate, pressure pump and anchor nail, the anchor nail is installed on drawing anchor board, draws to connect through...

In this article, Yu Jinxiang's editor will discuss in detail the common types of photovoltaic ground nails and their respective characteristics from a practical perspective, in order to provide a ...

From the test results reveal that the ground screw pile capacity can support and maintain the compression and pull-out load between 1,000 to 2,000 kg depend on the pile ...

When you're looking for the latest and most efficient Pull-out strength of photovoltaic support ground nails for your PV project, our website offers a comprehensive selection of cutting-edge products ...

This article provides recommendations based on the extensive experience of ORBIS TERRARUM in static load tests or pull-out tests for photovoltaic plants in several countries around the world.
