-----

Solar power is more than just an energy solution--it's an economic catalyst for St. Lucia. By reducing energy costs, creating jobs, and increasing energy independence, solar energy is ...

During November and December representatives of Sol-Lucian attended Energy Awareness Fairs in both the north and south of Saint Lucia to provide attendees with information on the products and ...

Saint Lucia has strong potential for large-scale solar energy projects, with increasing interest in renewable energy for both residential and commercial purposes.

To encourage clean energy adoption, Saint Lucia has implemented several temporary incentives. Solar PV systems benefit from exemptions from import duties and Value Added Tax ...

Additionally, and conditional upon the successful exploration of the resource, Saint Lucia intends to add geothermal energy generation to its renewable energy mix, which would bring overall ...

Electricity can be produced directly from solar energy using photovoltaic devices or indirectly from steam generators using solar thermal collectors to heat a working fluid.

Solar energy potential is estimated at 36 MW, equivalent to about 41 percent of installed capacity for electricity generation using fossil fuels. Moreover, Saint Lucia is estimated to have huge geothermal ...

By adding geothermal energy to the mix, it reduces the land needed for renewable energy implementation by reducing the amount of solar, wind and batteries required.
