The first of three storage projects is completed, enabling the island to integrate its solar energy production and enhance grid reliability.

The island nation's new energy storage power station isn't just about keeping the lights on--it's rewriting the rules of energy independence for small island states.

This article explores cutting-edge initiatives, technological innovations, and the role of energy storage in stabilizing Samoa's grid. Discover how these projects address energy security and climate resilience ...

Incorporating cutting-edge battery energy storage systems, the project will improve grid reliability by mitigating intermittencies associated with renewable energy sources. The facilities will ...

Constructed by Eastern Power Solutions, the solar-plus-storage projects will provide 10 MW / 20 MWh of critical clean capacity for the American Samoa grid.

The Independent State of Samoa and Electric Power Corporation (EPC) is seeking proposals from qualified Independent Power Producers (IPPs) to provide a total "turnkey" project including all ...

Energy Storage Systems (BESS) in Samoa to mitigate grid instability and energy transfer as result of high penetration of grid connected solar systems in both islands.

This expansion added 5MW of upgraded solar capacity along with 2MW of energy storage batteries, making it the first integrated solar-storage power station in Samoa and the entire South Pacific region.
