People have used the sun's rays (solar radiation) for thousands of years for warmth and to dry meat, fruit, and grains. Over time, people developed technologies to collect solar energy for heat and to ...

Explore IBM's 2025 solar strategy shift from PPAs to on-site generation for data centers. Discover how this pivot powers AI and ensures 24/7 clean energy.

Solar energy is radiation from the Sun that is capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy incident on Earth is ...

IBM, which operates around 60 data centres globally, is determined to make its operations more sustainable. With a bold target to achieve net zero carbon emissions by 2030, IBM ...

Expanding on its clean energy initiatives, IBM partnered with PowerFlex to deploy a large-scale solar carport and workplace EV charging program that supports employee electrification, contributes clean ...

We apply the same concept for other jurisdictions. IBM includes renewable electricity generated from wind, hydropower, biomass, solar, and geothermal sources in our reported renewable electricity ...

Students use SOLAR to register for classes, print schedules, view and pay bills, update personal contact information, view transcripts, and submit student employment timesheets.

Solar panels work through the photovoltaic (PV) effect. When sunlight hits the panels, it creates an electric current that is first used to power electrical systems in your home.
