Researchers from Australia's Murdoch University and ClearVue Technologies have developed new solar windows that can reportedly reduce energy consumption and water usage in ...

Specially designed BiPV solar glass modules for greenhouses, Heliene's Greenhouse Integrated PV (GiPV) modules offer a sustainable alternative with no additional racking or support required.

Researchers from Australia's Murdoch University and ClearVue Technologies have developed innovative photovoltaic glass that significantly reduces energy consumption in greenhouses.

High-tech glass helps you use solar energy more efficiently by maximizing light transmission and reducing heat loss. This means your greenhouse consumes less energy for heating ...

Integrating transparent solar panels with smart energy management systems not only reduces dependency on the power grid but also improves precise control over temperature, humidity, ...

The novel applications of glass/polymers/films with customized light absorbance and emission properties to regulate solar radiation and control internal and external (greenhouse) ...

In the latest example, the US startup UbiQD has developed a new form of solar glass that can help boost productivity in greenhouses.

We designed and constructed a greenhouse with high-transparency photovoltaic windows used as roof- and wall-mounted components of building envelope and demonstrated its significant ...
