The Copenhagen International School's new building is covered by 12 000 colored solar panels based on a technology developed at EPFL. This makes it the school's largest solar facade in ...

Sustainability and educating champions of the future are key elements for the Copenhagen International School (CIS). The school has set out to become a 100% sustainable institution and to educate and ...

The new aspect is the 25,000 sq.m. school building in Copenhagen's Nordhavn quarter, built to house Denmark's largest international school. Today, the building will be officially opened by ...

The Copenhagen International School's new building is covered by 12,000 colored solar panels based on a technology developed at EPFL. It is one of the largest building-integrated solar ...

The 12,000 solar glass panels can generate 300 megawatt hours of electricity per year, more than half of the school's annual energy needs. After much anticipation, the pre-K to 12th grade ...

The solar facade of Copenhagen International School was the first large building in the world to work with custom panel sizes, nanocoated colouring and a shingled mounting geometry.

In addition to contributing to the school's green profile, the solar cells also form a permanent part of the school's curriculum, allowing students to monitor energy production and use ...

CF M&#248;ller has designed a school on Copenhagen's waterfront, which is almost completely covered in solar panels that shimmer like sequins.
