A team of battery researchers, collaborating across multiple countries, just made a huge breakthrough for iron-chromium redox flow batteries.

Discover why Iron-Chromium Flow Batteries are emerging as the safe, cost-effective and scalable solution the world needs for long-duration energy storage.

Enter iron-chromium flow batteries - the Clark Kent of energy storage that's been hiding in plain sight since NASA's moon landing era. At its core, this technology dances to the tune of redox ...

Iron-chromium redox flow battery was invented by Dr. Larry Thaller's group in NASA more than 45 years ago. The unique advantages for this system are the abundance of Fe and Cr resources on earth and ...

The iron-chromium flow battery is a redox flow battery (RFB). Energy is stored by employing the Fe^{2+} - Fe^{3+} and Cr^{2+} - Cr^{3+} redox couples. The active chemical species are fully dissolved in the aqueous ...

The Iron-chromium redox flow battery (ICRFB) is a type of flow battery that utilizes iron and chromium as the active elements in the electrolyte. The ICRFB is a promising energy storage solution due to its ...

The Fe-Cr flow battery (ICFB), which is regarded as the first generation of real FB, employs widely available and cost-effective chromium and iron chlorides (CrCl_3 / CrCl_2 and FeCl_2 ...

Iron-chromium redox flow batteries are a good fit for large-scale energy storage applications due to their high safety, long cycle life, cost performance, and environmental friendliness.
