Energy storage systems, mostly large batteries, are important because they help store solar and wind power for use when the sun isn't shining or the wind isn't blowing. In 2025, over 31 ...

Even as the Trump administration rolled out a series of anti-clean energy policies, solar and storage still accounted for 82% of all new power added to the grid in its first six months.

Projects are expected to be delayed into 2024 and beyond due to changes in local regulations, uncertainty around how policies like the Inflation Reduction Act/Green Deal will be ...

Although these conditions might appear bleak--a delay on the path to net zero and yet another setback in an industry that has taken decades to take off--our analysis suggests a more ...

Short-term storage that lasts just a few minutes will ensure a solar plant operates smoothly during output fluctuations due to passing clouds, while longer-term storage can help provide supply over days or ...

As we approach 2025, the energy storage sector is poised for significant growth, driven first and foremost by increasing demand for grid-scale energy storage solutions, reinforced by ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

Storage, Markets, and Changing Incentives December 12, 2025 Explore the top solar energy trends for 2026, including storage growth, incentive changes, and why solar is becoming a ...
