What are the new offsite solar projects in Japan?

The four new offsite solar projects include: a 35MW solar farm in Fukushima Prefecture with EDP Renewables Japan, a 10MW solar farm in Hokkaido with HEXA Renewables Japan, another 10MW solar farm in Hokkaido, and a 10MW solar farm in Yamaguchi Prefecture with X-ELIO Japan.

Are perovskite solar cells coming to Japan?

Although conventional PV is no longer mass-produced in the country, Japan has been investing in perovskite solar cell technology in recent years, a technology invented by Tsutomu Miyasaka. Commercial production of perovskite cells in Japan is expected to begin by 2027.

What is the growth rate of solar generation in Japan?

In contrast with other renewables, solar generation has experienced rapid growth in Japan. In 2024, solar contributed approximately 97 TWh, representing almost 10% of the electricity generation share. Global solar generation grew by 474 TWh in 2024: its largest increase ever recorded and the biggest absolute growth of any energy source.

Will data centers increase demand in Japan by 2034?

In Japan, data centers, combined with planned semiconductor fabrication facilities, could raise peak demand by 7.15 GW and annual demand by 46.5 TWh by 2034. This increase is expected despite negative growth drivers such as population decline and energy-saving efforts [6, 7].

We thought it would be interesting to find out what the largest PV plants are that are actually already operating. For this reason, as part of our preparation for the conference Solar Asset ...

As of July 2021, Japan was aiming at 108 GW of solar capacity by 2030. In May 2021, the Japanese Trade Ministry said that Japan may require up to 370 GW of solar capacity by 2050 to reach the goal ...

Data and information about Solar power plants and their location plotted on an interactive map of Japan.

The Japanese government is seeking to expand solar power by enacting subsidies and a feed-in tariff (FIT). In December 2008, the Ministry of Economy, Trade and Industry announced a goal of 70% of new homes having solar power installed, and would be spending \$145 million in the first quarter of 2009 to encourage home solar power. The government enacted a feed-in tariff in November 2009 that requires utilities to purchase excess solar power
