In January, German researchers announced they had broken a new record for solar energy efficiency, converting a full 41.1 per cent of the power of incoming rays into electricity.

A new federal law in effect this year allows utilities to claim a 30 percent investment tax credit for owning solar power plants. And sure enough, electricity retailers began to propose their own solar projects.

By the end of 2009, nearly 23,000 megawatts of PV had been installed worldwide, enough to power 4.6 million U.S. homes. Solar PV, the world's fastest-growing power technology, ...

Despite the global economic downturn, solar cell production hit another record in 2009, according to the Earth Policy Institute.

This document published in 2009 presents comprehensive research findings on climate science, environmental policy, and sustainability challenges.

Global installed solar photovoltaic power grew by 44 percent in 2009 on the back of German subsidies now under threat, the European Photovoltaic Industry Association said on Tuesday.

Between 2009 and 2024, solar electricity generation skyrocketed globally, with China leading the charge. China's rise is unparalleled --from near-zero in 2009 to an estimated 1,050 TWh in 2024, ...

Investment in wind power and solar PV increased in 2009 according to a United Nations Environmental Program report.
