With the new projects online, renewables (including wind, solar, geothermal and hydropower) and battery storage now make up 30% of the country's large-scale power generating ...

Wind and solar developers often bring their projects on line at the end of the calendar year. So, the new capacity tends to affect generation growth trends for the following year.

Solar and wind accounted for 91% of new US electrical generating capacity added in H1 2025, according to data just released by FERC.

Average construction costs for solar generators increased by 1.7% in 2022, and for wind turbines they increased by 1.6%. These three technologies--solar, wind, and natural ...

(GEM). The 339 GW of utility-scale solar and wind that have reached the construction stage accounts for one-third of all proposed wind and solar capacity in China, far surpassing the ...

According to a U.S. Customs and Border Protection Commodity Status Reports, since the President raised the annual tariff rate quota for cells to 12.5 GW in August, imports have continued to ...

For solar PV, wind and bioenergy for power, deployment has been revised downwards. Solar PV accounts for over 70% of the absolute reduction, mainly from utility-scale projects, while offshore ...

Total renewable capacity (on-grid and off-grid) Hydropower Renewable hydropower (including mixed plants) Pumped storage (note that this is included in total hydropower capacity, but ...
