Electricity from offshore wind is brought to shore via high-voltage direct current transmission lines, then connected to the grid to power homes and businesses.

Trade in solar and wind energy technologies is booming, supporting the overall transformation of the electricity sector. However, the expansion of these technologies has not been fast enough to replace ...

revenues and thus enhance competitiveness of wind generation compared to other forms of dispatchable generation. This paper formulates a general methodology for deriving optimal bidding ...

In the context of the global energy transition and the realisation of the "double carbon" goal, the coupled trading decision of wind power generation enterprise

Power purchase agreements (PPAs) offer a potential solution. Relatively common in the US, they are finally gaining traction in the increasingly volatile and cost-competitive European wind ...

This policy allows and advocates the direct transaction between the power consumption enterprises and all wind power and photovoltaic power generation enterprises.

The results show that the combined trading of wind-thermal power generation rights, incorporating carbon trading and green certificate trading, can effectively promote coal consumption ...

When a wind project is owned by an independent power producer rather than a utility serving its own load, the agreement that provides for an assured source of revenue from the energy output and ...
