-----

In the context of vigorously advocating the transformation of electric energy production to green and low emission, it is very important to rationally allocate the wind-solar storage capacity of micro-grid. ...

In this paper, an improved energy management strategy based on real-time electricity price combined with state of charge is proposed to optimize the economic operation of wind and ...

In this article, we address the grid-connected wind-solar-storage microgrid system by establishing a mathematical model for the output power of wind and photovoltaic generation as well ...

This handbook offers insights into leveraging simulation tools and methodologies for the design, optimization, and deployment of control mechanisms within solar photovoltaic storage-based ...

This paper analyses the structure and function of the microgrid system, establishes the mathematical model, and analyzes the output characteristics.

This research project aims to design and build a small-scale microgrid that is powered by renewable energy sources, including batteries, solar, and wind. An energy management system is ...

To address the collaborative optimization challenge in multi-microgrid systems with significant renewable energy integration, this study presents a dual-layer optimization model ...

This study investigates the capacity configuration optimization of park-level wind-solar-storage microgrids, considering carbon emissions throughout the lifecycle.
